1 Summary & Issue Status

This document lists the eight issues reported against Mbumah Hardware POS, describes what was fixed in version 2.8.0, and sets out the acceptance tests that Sam should run before sign-off. Two bonus items — a critical Inventory loading error and a clean uninstall option for the laptop application — shipped with the same release and are included in the table below. Section 2 explains each change in practical terms, and Section 3 provides the tick-box test plan.

#	Issue Reported	Priority	Status in v2.8.0
1	VAT control — Admin side	1 (Highest)	Fixed — admin-controlled, dynamic
2	Scanning on invoices + delivery	2	Fixed — real scannable QR codes
3	Vouchers not sending (Email/SMS/WhatsApp)	3	Fixed — real sending + Sent/Failed status
4	WhatsApp/SMS output visibility	4	Fixed — enlarged scrollable preview
5	Download PDF on all invoices + delivery	4	Added
6	Delete option on all invoices (+ delivery)	4	Added — with confirmation
7	WhatsApp integration general check	1	Verified/fixed — deep links + gateway config documented
8	Bonus: "Unable to load Inventory" error	Critical	Fixed
9	Bonus: Uninstall option for the laptop app	-	Added

2 What Changed & How It Works

Each change is described below in practical terms: where the feature lives, how it behaves after the fix, and what to look for when testing.

2.1 VAT Admin Control

The VAT rate is set from the admin side: Admin, System Configuration, Store tab, "VAT Rate (%)". Setting 0% makes every VAT field zero on all new sales, invoices and purchase orders, while existing documents keep their original numbers. When the rate changes again, no code changes are needed — just update the same screen.

2.2 Scanning on Invoices and Delivery Notes

The KRA eTIMS invoice QR is now a genuine scannable QR: a normal phone camera resolves and verifies the document. Invoice and delivery-note views also show an on-screen "Scan to verify" QR, matching what receipts already do. Documents can therefore be verified from the screen or from a printout.

2.3 Voucher Sending (Email, SMS, WhatsApp)

Vouchers can now actually be delivered: Email goes through Resend, and SMS and WhatsApp go through Twilio. Every attempt is recorded and shown as Sent (green), Failed (amber) or Simulated (blue), so nothing is lost silently. Where a gateway is not yet configured, WhatsApp still works through the preview plus "Open in WhatsApp" fallback.

> **Important — gateway configuration.** Live sending needs API keys: RESEND_API_KEY for email; TWILIO_ACCOUNT_SID, TWILIO_AUTH_TOKEN and TWILIO_FROM_PHONE for SMS and WhatsApp. Until then, WhatsApp falls back to the preview and the "Open in WhatsApp" button, so voucher issuing is never blocked.

2.4 WhatsApp / SMS Output Visibility

WhatsApp and SMS output now opens in a large, scrollable preview box before anything is sent. A Copy button sits beside the preview, so the exact text can be pasted anywhere. This makes it easy to check what a customer will receive.

2.5 Download PDF on All Invoices and Delivery Notes

Every invoice type — Invoice, Quotation, Proforma, Credit Note and Debit Note — has a Download PDF button, and so does every delivery note. The file is the same branded A4 document used for printing. It opens in any PDF reader and can be emailed to customers as it is.

2.6 Delete on Invoices and Delivery Notes

Invoices and delivery notes now have a Delete button protected by a confirmation prompt, so records cannot be removed by accident. Deleting is permanent and is written to the audit log. Only manager-level roles see the button; ordinary cashier accounts do not.

2.7 Uninstall Option (Laptop App)

Uninstall-Mbumah-POS.bat removes the laptop application cleanly. It offers a final data backup first, and backups are never deleted. Program files, shortcuts and startup entries are removed; run it on a test machine before using it on a till.

3 Acceptance Test Checklist

Run the tests below on the version 2.8.0 build and tick each one as it passes. Tests 1 and 2 need admin access, and test 12 applies to the laptop application only. If a test fails, note the step and the screen so the Development Team can reproduce it quickly.

Done	Acceptance Test
☐	Set VAT to 0% in Admin, then create a new sale — VAT shows 0.00
☐	Set VAT back to 16%, create an invoice — VAT appears at 16%
☐	Open the Inventory tab — it loads without the "Unable to load Inventory" error
☐	Open an invoice — the "Scan to verify" QR is visible; scan it with a phone
☐	Download PDF on an invoice — it opens as a branded A4 PDF
☐	Download PDF on a delivery note
☐	Delete a test invoice — a confirmation prompt appears, then the invoice disappears
☐	Send a voucher via WhatsApp — the preview shows the full text and "Open in WhatsApp" works
☐	Send a voucher via Email or SMS — the status shows Sent, Failed or Simulated correctly
☐	Scan the KRA eTIMS QR on an invoice with a phone — it opens or decodes correctly
☐	Check the Delivery tab — WhatsApp, SMS, PDF and Delete are all present
☐	(Laptop only) Run Uninstall-Mbumah-POS.bat on a test machine — a backup is offered and shortcuts are removed

Table 2 — Acceptance tests for version 2.8.0 sign-off

> **Closing note.** All fixes ship in version 2.8.0. Please report anything that does not match this checklist to the Development Team and it will be addressed before final sign-off.
